

Daniil Makeev

AI Engineer

wyddy.work@gmail.com · t.me/wyddy7 · github.com/wyddy7 · wyddy.tech · Yerevan, Armenia · Open to relocation / remote

AI engineer with ~3 years in Python, ~1.5 of them building LLM systems that run in production. At hao.vc (AI lab) I rebuilt the video-generation service, cutting turnaround **from ~60 to ~10 minutes** and cost **from ~\$2 to ~\$0.80 per clip**. Published **Browd**, an AI browser agent, to the **Chrome Web Store**. My focus is making LLM agents reliable enough to run unattended in production: automated evals and failure recovery that keep them working when a model or provider misbehaves.

EXPERIENCE

hao.vc (AI lab) — Applied AI Engineer

Jan 2025 – Present

- Rebuilt the AI video-generation pipeline end-to-end, cutting production time **from ~60 to ~10 minutes (6x faster)** and cost **from ~\$2 to ~\$0.80 per video (–60%)**.
- Split the pipeline into independent, restartable jobs in **Python** and **Prefect** (script generation via **OpenAI API**, voice-over via **ElevenLabs**, image generation, **FFmpeg** composition, subtitles, upload to **AWS S3**), shipping **100+ fully AI-generated clips** to production through it.
- Built a resilience layer against provider failures: layered retries (up to 5 attempts, exponential backoff), fallback assets, **ffprobe** media checks, and GPT-based auto-repair of malformed model outputs (**Pydantic v2**), covered by **208 automated tests (pytest)**.
- Owned the pipeline and drove the **~6-person** effort around it (content, ads, engineering; **ClickUp** task planning, provider budgets). Content shipped through the full cycle (generation, posting, feedback) collected **~800K views** across the project's channels.

Stack: S3 (boto3), Prefect, FFmpeg, ElevenLabs, OpenAI API, Docker, Pydantic v2, Python.

EdTech Platform (NDA) — Backend Developer

Apr 2026 · Contract

- Built an interview-scheduling service (**Telegram Mini App: FastAPI + PostgreSQL/asyncpg** backend, **HMAC**-verified Telegram auth), **live in production** and serving the platform's **~700 students**.
- Set up CI/CD onto the client's own infrastructure (lint, tests, **Docker** image build to **GHCR**, auto-deploy, versioned SQL migrations) and **handed the running service to the client's team**.

Stack: Telegram Mini App / WebApp, FastAPI, PostgreSQL, asyncpg, Docker, GHCR, Python.

Independent / Open-Source AI Projects

2025 – Present

- **Browd** — browser AI agent that acts in the user's real logged-in session rather than a headless cloud VM, with human-in-the-loop permissions for sensitive actions; typed recovery across **6 failure classes**, an LLM-as-judge eval harness, and **218 automated tests**. Published to the **Chrome Web Store**. github.com/wyddy7/browd
- **NetWho** — Telegram contact-memory assistant: tool-calling agent over hybrid SQL + vector search (**pgvector**) with voice input. It keeps its own contact base current and surfaces a person plus everything saved about them from one fuzzy phrase. github.com/wyddy7/netwho
- **Cate** (open-source IDE, **~1.7k★**) — contributor: PR **merged and shipped in release v1.1.1**, filed issues fixed upstream.

Stack: LangGraph / LangGraph.js, TypeScript, React, Chrome Extension MV3, Supabase / PostgreSQL + pgvector, Groq Whisper, Docker, GitHub Actions.

Zenit-Electro — Python / Data Automation Engineer

Jun 2023 – Jan 2025

- Built and maintained catalog and spreadsheet automation (import/export, data validation) that non-engineering staff ran day-to-day, saving an estimated **~8–12 hours** of manual work per week.

Stack: Python, ETL-style automation, SQL, data validation.

SKILLS

Skills: Python, TypeScript, SQL, LangGraph, LangGraph.js, LangChain, deepagents, OpenAI API, RAG, pgvector, LLM evals (LLM-as-judge), tool-calling, structured outputs, prompt engineering, FastAPI, Pydantic v2, asyncio, asyncpg, aiogram, python-telegram-bot, React, Chrome Extension MV3, Telegram Mini App

Tools: Docker, GitHub Actions, GHCR, PostgreSQL, Supabase, AWS S3 (boto3), Prefect, FFmpeg, ffprobe, pytest, ElevenLabs, Groq Whisper, Git, Linux

EDUCATION & LANGUAGES

Bauman Moscow State Technical University — Computer Engineering / Computer Systems · 2026, combined with full-time engineering work since 2023 · **Languages:** Russian — native · English — B2
